

What is claimed is:

1. A medicament application device adapted for using with a medicament container, said medicament container having an opening for dispensing medicament contained in said container to the device, said medicament application device comprising:

5 a plate defining at least one hole therethrough;

 a connector extending from a bottom side of said plate to a proximal end, said connector proximal end being adapted for connecting to said opening of said container, wherein said connector defines an inner channel therethrough, said inner channel being in fluid communication with said opening of said container and said hole of said plate; and

10 a medicament applicator detachably attached to a top side of said plate, said medicament applicator being made from a fluid permeable material.

2. A medicament application device according to claim 1, wherein said medicament applicator is made from sponge.

3. A medicament application device according to claim 1 further comprising a cover
15 disposed on a top surface of said medicament applicator, said cover being detachably attached to said plate to secure said medicament applicator on said plate, wherein said cover is made of a fluid permeable material.

4. A medicament application device according to claim 3, wherein said cover is made from a mesh.

20 5. A medicament application device according to claim 1, wherein said plate comprises a plurality of flexible hooks extending from the top side of the plate, and said applicator is detachably attached to said plurality of flexible hooks.

6. A medicament application device according to claim 1, wherein said plate defines a plurality of relatively small holes near peripheral edges of the plate, and said medicament
25 applicator includes a plurality of protrusions extending from a bottom surface of said

medicament applicator, said protrusions being adapted to snap-fit into said relatively small holes.

7. A medicament application device according to claim 1, wherein said at least one hole comprises a plurality of holes.

5 8. A medicament application device according to claim 1, wherein said at least one hole has a star-like shape.

9. A medicament application device according to claim 1, wherein said applicator includes a porous backing and bristles extending from said porous backing, said porous backing being detachably attached to the top side of said plate.

10 10. A kit including a medicament application device according to claim 1, and further comprising:

a medicament container for connection with the connector.

11. A kit according to claim 10, wherein said kit further includes a bottle of solution.

12. A kit according to Claim 11, wherein said bottle of solution contains a
15 medicament selected from the group comprising:

(a) moisturizing bath rinses;

(b) non-steroidal and steroidal anti-inflammatories and/or anti-pruritics;

(c) anti-infectives; and

(d) anti-parasitics.

20 13. A kit including a medicament application device according to claim 1, and further comprising:

a plurality of the medicament applicators for detachable attachment to a top side of the plate.

14. A medicament application device adapted for using with a medicament container, said medicament container having an opening for dispensing medicament contained in said container to the device, said medicament application device comprising:

a plate defining at least one hole through said plate;

5 a connector extending from a bottom side of said plate to a proximal end, said connector proximal end being adapted for connecting to said opening of said container, wherein said connector defines an inner channel therethrough, said inner channel being in fluid communication with said opening of said container and said hole of said plate; and

bristles extending from a top side of said plate.
